Acoustics and Vibrations

Passive Noise Protection - Service from one single source

Having gained over 20 years of experience in the industry, DB Systemtechnik is your competent place to turn to when it comes to "passive noise-protection measures". We offer not only **technical noise examination testing**, but also **implementation and validation services for passive noise protection** — all from a single source. When it comes to passive noise protection, we systematically work through all relevant steps starting from planning approval up through the measure or measures to be integrated.

Our services:

- **Prior to the acoustic computation:** Compiling of basic data and ownership and initial contact with the respective owners
- **The acoustic computation:** Data collection at the object in question, identification/determination of the available and required noise-protection measures, compensation for exterior living areas
- **After the acoustic computation:** Forwarding of inspection reports, evaluation and analysis of offers and construction approval, accompaniment of the implementation process, final acceptance and issuance of payment
- Broad and diverse range of tasks (simulation services, calculations/computations, measurements, packaged services)
- Management and coordination of administrative outlay within a project

Your benefits:

- Straightforward development thanks to services from a single source and all-included service package
- No administrative outlay
- You profit from the operational experience, we have gained over the last 20 years, as well as from a streamlined business approach of the largest provider of passive noise-protection measures in Germany

July 2017

Our Knowledge: **Your success**
