

DB Systemtechnik: Our Knowledge – Your Success

As the engineering office of DB AG, we are Europe's largest centre of competence for railway technology.

As a high performance, customer-driven service provider with a vast array of expert knowledge, DB Systemtechnik is a respected partner of Deutsche Bahn and external customers across the globe.

We offer the following tailored services for rolling stock, associated components, infrastructure and interfaces.

Our range of Products:

- Strategic and technical consulting
- Engineering services for procurement and operation
- Homologation and testing
- Services for maintenance technology
- Measurement technology

We have more than 900 employees located in Germany, England and France that are ready to ensure that the requirements and needs of our customers in all technical areas are fulfilled. With 13 accredited test centres and laboratories, we can provide specialist expertise in all areas of rail technology that is unique in the international rail market.

Our subsidiary, infraView, strengthens our range of services with innovative software expertise. Based on the infraView BigData platform, we offer attractive solutions in the field of predictive maintenance.

DB Systemtechnik guarantees independence, neutrality, professionalism and confidentiality. Our expertise will help you succeed.
